Summary

A skilled Data Engineer with experience of almost 3 years of expertise in designing and optimizing ETL pipelines, data warehousing, and cloud-based solutions on AWS and Azure. Proven track record in enhancing data processing efficiency and mentoring junior engineers.

Technical Skillset

- **Programming Languages:** Python, SQL, NoSQL, Shell,
- **Framework / Platform:** AWS S3, AWS Lambda, AWS EC2, AWS Sagemaker, AWS API Gateway, AWS Dynamo DB, AWS Glue, AWS Redshift, MongoDB, SQL Server, Flask, PowerBI, Snowflake, Tableau
- **Libraries & Tools:** Apache Airflow, PySpark, Beautiful Soup, Selenium, Git, Data Lake

Professional Experience

OfficeField, Data Engineer

August 2024 – Present

- Developed and implemented end to end data engineering solutions, leveraging cloud technologies using AWS services such as Glue, Lambda, and S3, ensuring seamless data processing and integration across the company's infrastructure.
- Collaborated with cross functional team to construct scalable data pipelines for retail industry and optimized the already build pipelines while 40% improving the data governances by using snowflake.
- Optimized data workflows by leveraging AWS Athena and Redshift, reducing processing times and enhancing data integrity across various systems.
- Implemented scalable data storage and retrieval solutions using AWS S3 and DynamoDB, ensuring high availability and quick access to critical data.

SMIT, Junior Data Engineer Instructor

April 2024 – Present

- Collaborated to design and implement an AWS-focused Data Engineering course curriculum, equipping over 150+ students with hands-on experience in cloud technologies.
- Crafted engaging lectures on AWS data engineering tools and techniques, such as S3, Glue, and Redshift, to classes of up to 100 students per session.
- Assisted in 10+ practical exercises and projects centered on AWS, enhancing students' hands-on learning experiences with real-world scenarios.
- Provided one-on-one mentoring to 30+ students, guiding them through AWS challenges and helping them achieve a 95% course completion rate.

Speedylancer, Data Engineer

January 2022 – July 2024

- Constructed and maintained 5+ robust ETL pipelines on AWS utilizing S3, Glue, Lambda, and Athena, processing of data daily.
- Enhanced web scraping processes, increasing performance by 80% and effectively managing IP blocks.
- Improved advanced PDF data extraction techniques, achieving a 40% reduction in data retrieval time from the medical reports of the patients.
- Teamed up with cross-functional teams to design and deploy scalable data solutions, ensuring 99.9% system availability and reliability.

Dolphin Analytics, Data Analyst Intern

January 2022 - July 2022

- Developed a comprehensive Data Warehouse system to manage and analyze Pakistan stocks data, increasing data accessibility by 70% and enabling strategic decision-making.
- Created 20+ dynamic dashboards using Power BI, Tableau, and Google Data Studio (GDS), providing stakeholders with clear, actionable insights from complex datasets.
- Partnered with REALT, the largest real estate company in the USA, to analyze data and deliver valuable insights, contributing to data-driven decision-making in the real estate sector and improving analysis efficiency.

Projects

AIverse: Marketplace for AI Models (FYDP)

Nov 2023 -Present

- Managed the end-to-end development process, from ideation to coding, facilitating seamless connection between AI creators and users in a dynamic hub for model deployment and sales.
- Implemented containerization of model images and deployed them on **AWS SageMaker** using images from ECR, creating APIs with **AWS API Gateway** and **AWS Lambda**.

Olympics Data Analysis

- Organised and implemented a robust ETL integration pipeline using **Azure Data Factory**, orchestrating seamless data flow and storing it in **Data Lake Gen2**.
- Executed advanced data transformations in **Azure Databricks** and facilitated analytics-driven insights through **Synapse Analytics**, enhancing data accessibility and decision-making.

Covid-19 Data Warehousing

- Developed an ETL pipeline using **AWS S3**, **Glue**, and **Athena** to process and store large datasets.
- Designed and implemented a data warehousing solution using **AWS Redshift**, ensuring efficient data management and accessibility.

Publications

“XGBoost and Random Forest Algorithms: An In-Depth Analysis”. Published in the Pakistan Journal of Scientific Research. LINK: <https://doi.org/10.57041/pjosr.v3i1.946>

Achievements

- Secured the Runner-Up position in a competitive Data Science competition at NEDUET (Envision 2022), outperforming 50+ participants.
- Honored as the Best Presenter at **APICEE'23** for an outstanding presentation that engaged 10+ industry experts and academics, showcasing innovative engineering solutions with clarity and impact.
- Won the Provincial level competition of **National Idea Bank 2023**, emerging victorious among 2200+ applicants nationwide.

Qualification

2020-2024	BE Software Engineering	NEDUET	GPA – 3.449
2018-2020	HSC, Pre Engineering	Adamjee Government Science College	Grade: A-1

Interests and Extracurricular Activities

- Technical Head at Artificial Intelligence Club, NEDUET.

Certifications

DataCamp – Certified Power BI and Tableau Data Analyst, November 2022

Coursera – Microsoft Azure Data Engineering Associate (DP-203), September 2023 – Present

Udemy – AWS Data Engineering Associate
